Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GENERAL INFORMATION:
APPLICANT: Krieg, Arthur M.
APPLICANT: Welner, George
APPLICANT: Welner, George
TITLE OF INVENTION: Methods and Products for Stimulating the
TITLE OF INVENTION: Tumune System Using Immunotherapeutic Oligonucleotides and
TITLE OF INVENTION: Cytokines
FILE OF INVENTION: Cytokines
FILE OF INVENTION: Cytokines
FILE REFERENCE: C1039/7026/FIC.
CURRENT APPLICATION NUMBER: US/09/286,098
GURRENT FILING DATE: 1999-04-02
EARLIER APPLICATION NUMBER: US 60/080,729
EARLIER FILING DATE: 1998-04-03
NUMBER OF SEQ ID NOS: 105
SEQ ID NOS: 105
SEQ ID NO 100
LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 105, Application US/09286098

Patent No. 6218371

Patent No. 6218371

DINUCLEOTIDE IN THE TREATMENT OF

APPLICANT: Krieg, Arthur M.
APPLICANT: Schwartz, David A.
TITLE OF INVENTION: USE OF NUCLEIC ACIDS CONTAINING
TITLE OF INVENTION: UNMETHYLATED CAG DINUCLEOTIDE IN
TITLE OF INVENTION: LES-ASSOCIATED DISORDERS
FILE REFERENCE: C1039/7011
CURRENT APPLICATION NUMBER: US/09/030,701B
CURRENT FILING DATE: 1998-02-25
PRIOR APPLICATION NUMBER: 60/039,405,
PRIOR FILING DATE: 1997-02-28

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 10, 1

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

TITLE OF INVERTION: Cell Lyais and Treating Cancer
TITLE OF INVERTION: Cell Lyais and Treating Cancer
FILE REPERENCE: C1039/052 AMS)
CURRENT APPLICATION NUMBER: US 60/213,346
PRIOR PILING DATE: 2001-06-22
NUMBER OF SEQ ID NOS: 848
SOFTWARE: FeatSEQ for Windows Version 3.0
IENGTH: 20
TYPE: DNA
ORGANISM: Artificial Sequence
FRATURE:
OTHER INFORMATION: Synthetic oligonucleotide
NAME/KEY: misc feature
LOCATION: (0)...(0)
OTHER INFORMATION: chimeric phosphorothioate/phosphodiester backbone
OTHER INFORMATION: with phosphorothioate at 5' and 3' ends

/clone="Vector: lambda ZAP Express/pBK-CMV; Site_1: ECORI
/clone="Vector: lambda ZAP primed with
a a 50 bp linker primer containing an oligo dT sequence
preceeded by a synthetic Xhol site. 5 prime adaptors were
used containing an ECORI cohesive end. The finished cDNAs
were inserted in to the ZAP express vector
unidizectionally in the sense orientation with respect to
the lacz promoter of pBK-CWV. An amplified library was
prepared from approximately 3 million primary clones in
the lambda ZAP Express vector. In vivo excision was then
used to generate individual pBK-CMV phagemid clones for
EST sequencing."
                                                                                     /note="Organ: leaf; Vector: pBCSK(-); Site_1: HincII; DNA prepared from purified nuclei was randomly sheared, end-repaired, size fractionated to enrich for the 0.5 to 5 kb fraction, ligated into HincII-digested pBCSK(-) vector and electropozated into E. coli cells. This is a methylation filtered library."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AR052624 BAL16926 AR140496 AR140496 AR140347 SAR140534 BAL164748 BD006938 UBD0060525 BD190420 BD190420

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
